

PERSONA 01

Quantitative Trader

Can also be systematic trader,
high frequency trader,
algorithmic trader

THE ROLE

A financial investor whose strategy is mathematical in nature. They use large data sets to build strategies that maximize **alpha**.

WHERE WE FIT

We are an alternative data layer, a non-fundamental signal traditional investors may not consider, which helps them create differentiation in their data, known as **data novelty**.

THE SOURCE ADVANTAGE

We are the **only licensed provider of structured signals derived from Twitter (X) and podcasts**, and we also have StockTwits. All novel sources which is where our value for this persona sits.

THE VALUE

Our signals are structured to plug into models, already validated through our NLP. Over fifteen factors qualify each one, these are our **S-Factors**.

WHAT THEY ARE MEASURED ON · KPIs**01 / RETURNS****Contribution to PnL.**

Sharpe, hit rate, timing and drawdown, traced to the factor that drove it.

02 / DURABILITY**Survives production.**

Data that backtests nicely but is behind live is the fear, stability matters.

03 / DIFFERENTIATION**A factor nobody else has.**

Novel sources are the point. A crowded dataset is not an edge.

WHAT TO SELL THEM**S-Factor Feed**

MRF · Machine Readable Filings

SUPPORTING see page 08

Custom Feeds

BUILT TO REQUEST see page 04

TRADING STRATEGIES

Our social feeds are built for higher frequency models and short term strategies, where signals from event catalysts decay quickly. Our feeds have **sub 1-minute delivery** to evade decay and ensure maximum alpha on the signal, with none of the data cleaning alternative data usually demands.

LEAD WITH

Data novelty first, then transparency: our feeds are **never blended**, so they see source, processing and signal.

DON'T SAY

Never "AI-generated signal" the engine is rules-based NLP and this technical crowd fears hallucination.

DISCLOSURE · HOW OPENLY THEY TALK

Highly secretive - this group will not be one to share performance metrics, give testimonials, or make statements disclosing they use our data. Deals with this crowd will be under NDA - prohibiting usage of their name for sales/marketing material.

PERSONA 02

Risk Manager

Can also be portfolio risk analyst,
compliance / risk officer, credit risk
analyst

THE ROLE

A risk manager's job is to identify, monitor and mitigate exposure across a portfolio or set of holdings. Their goal is to flag emerging risk before it materializes into losses. They typically work at hedge funds and capital firms.

HOW THEY DIFFER FROM QUANTS

They are less focused on generating alpha and more focused on **surfacing signals that protect capital and inform oversight**. We fit them on two different time horizons, depending on the kind of risk they are watching for.

WHAT THEY ARE MEASURED ON · THEIR KPIS

01 / EARLY WARNING

Risk seen in time.

Emerging exposure flagged before it materializes into losses, rather than explained after the fact.

02 / BREADTH

Nothing unwatched.

Their value comes from coverage across every holding and every disclosure, not so much speed.

03 / REDUCED LABOR

Hours off the team.

Manual review is the bottleneck. They cannot staff a model around an insight, and should not have to.

WHAT TO SELL THEM

AI Summary Feed

SHORTER-TERM SIGNAL see page 05

GMRF / MRF

LONGER-TERM SIGNAL see page 08

Custom Sentiment Engine Projects

SCOPE WITH A CA ANALYST see page 08

Custom feeds for this persona include **pump and dumpers** and **activist short sellers**. Product detail, filing types and objection handling live on the product reference sheets.

USE PATTERN

Risk managers are **less latency-sensitive**. Their value comes from breadth of coverage and reduced manual review — whether that is fast qualitative context through AI Summaries, or systematic filings monitoring through GMRF/MRF.

LEAD WITH

Breadth of coverage and removed manual review. Then the AI distinction, it writes the summary, never the signal, so nothing they pass upstairs is a hallucination.

DON'T SAY

Don't lead with sub 1-minute delivery, and don't pitch alpha generation. Neither is why this persona buys.

DISCLOSURE · HOW OPENLY THEY TALK

More collaborative. The most open of our three personas: they will usually describe their coverage gaps, their review process and where the manual labor sits, because the problem is operational rather than proprietary. Best persona to run discovery with.

PERSONA 03

Portfolio Manager

Can also be discretionary PM,
fundamental analyst, long/short PM

THE ROLE

A portfolio manager makes buy, sell and sizing decisions across a portfolio of holdings, with the goal of generating alpha and managing risk-adjusted returns. They often work at hedge funds, mutual funds and other capital firms.

WHAT THEY'RE FOCUSED ON

Decision support — validating or invalidating a thesis, understanding catalysts, and staying ahead of what is moving a name. Most of what we sell them gives fast context without a data engineering lift, but **PM workflows can also plug into our structured feeds directly.**

WHAT THEY ARE MEASURED ON · THEIR KPIS

01 / RETURNS

Alpha, risk-adjusted.

Performance across the book, with risk-adjusted returns managed rather than maximised in isolation.

02 / DECISIONS

Buy, sell and sizing.

The quality and the speed of the calls they make on every position they hold.

03 / CONVICTION

Thesis validated early.

Catalysts understood, and a thesis confirmed or killed before the name reprices.

WHAT TO SELL THEM

AI Summary Feed

LEAD PRODUCT (SHORT STRATEGY) see page 05

Dashboard & Widgets

NO INTEGRATION NEEDED see page —

Podcast Sentiment Analysis Feed

BOTH OUTPUTS (LONG STRATEGY) see page 07

GMRF / MRF

THESIS & RISK FLAGS see page 08

Product detail and objection handling live on the product reference sheets.

USE PATTERN

PMs sit **between the quant trader and risk manager** in terms of latency needs. Unlike quant traders they do not need sub 1-minute, model-ready signal delivery; unlike risk managers they do benefit from real-time event visibility to act on catalysts as they emerge. Their core value comes from fast, reliable context that supports decision-making — not signal engineering.

LEAD WITH

Fast, reliable context on any name, with no model to build — and the same underlying signal systematic desks trade on.

DON'T SAY

Skip S-Factor mechanics, factor counts and integration detail. To a PM that reads as work they would have to do.

DISCLOSURE · HOW OPENLY THEY TALK

Somewhere in between. More forthcoming than a quant desk about what they are watching and why, but still guarded on positions and sizing. They will discuss a thesis in general terms — enough to qualify, rarely enough to confirm. Most institutional investors operate very secretly — assume nothing they tell you is the full picture.

PRODUCT 01 · SOCIAL SENTIMENT

S-Factor Feed

PERSONAS · QUANT TRADER + PM WORKFLOWS

HORIZON · SHORT TERM, HIGHER FREQUENCY

WHAT IT IS

Our main social feed, using our own proprietary rules-based NLP Sentiment Engine. Over fifteen factors go into qualifying each signal, our S-Factors, and the output is structured and able to plug into models.

THE SOURCE ADVANTAGE

We are the **only licensed provider of structured signals derived from Twitter (X) and podcasts**, and we also have structured signals from StockTwits. All are considered novel sources.

ONE ENGINE, THREE FEEDS

01 / S-FACTOR FEED

The core social signal.

Structured, model-ready sentiment qualified by fifteen-plus S-Factors.

02 / ACTIVITY FEED

The granular view.

When raw data was ingested, for visibility into the timestamps of event catalysts.

03 / QUANT NEWS FEED

The news side.

Same engine, ingesting purely news sources, globally. See page 06.

COVERAGE · S-FACTOR FEED + ACTIVITY FEED, ACROSS ALL SOURCES

U.S. Equities	Canadian	Australian	Indian	Paris	Japanese	European	Korean	Israel	Brazilian · coming soon
Futures	Forex	Commodities	Crypto	Private Company					

Our feeds have coverage across asset classes and we are constantly working to expand it.

TRACK RECORD & TRIALS

We have **up to 10+ years of historical data** across all social, news and podcast feeds, backtested against the S&P 500 to demonstrate alpha generation. We provide history during trial periods so investors can run their own backtesting. Anything we did not record ourselves has been backfilled, as is any outage.

WHO IT IS BUILT FOR

Higher frequency models, or investors with a short term strategy. Signals derived from event catalysts or market reactions typically have higher signal decay, which is why our social feeds ingest in real-time with **sub 1-minute delivery** — maximum alpha on the signal, and none of the typical data cleaning that comes with alternative data.

CUSTOM FEEDS

We also work with clients to create custom feeds, pulling **various themes, topics or specific company mentions**. Use this when a prospect's universe or thesis does not map cleanly to a standard feed.

THE THIRTY-SECOND VERSION

"Structured, model-ready sentiment from sources almost nobody else quantifies, qualified by fifteen-plus factors, delivered in under a minute — with full visibility into how the signal was built."

IF THEY PUSH BACK

"Isn't this keyword sentiment?" No. It is a rules-based NLP engine with fifteen-plus qualifying factors and full transparency of source, processing and signal.

PRODUCT 02 · QUALITATIVE SENTIMENT

AI Summary Feed

PERSONAS · RISK MANAGER + PM

HORIZON · SHORTER TERM

WHAT IT IS

A complement to our S-Factor Feed. It takes the same underlying social discussions our quant traders use and converts them into a qualitative, English summary of what is happening with a security, based on a 24 hour period.

WHY IT EXISTS

It removes the data engineering lift while still delivering the core value of the signal. That is what makes algorithmic-grade sentiment usable by a team that cannot staff a model — **the signal without the build.**

THE MOST IMPORTANT DISTINCTION

The processing of the signal does not change. We do not use AI to qualify the signal — we add it on after, to provide more context around the sentiment metrics. This ensures the metrics stay true to the actual discussion on social media, with no chance of being an AI hallucination. Say it explicitly; it is the question every buyer has.

HOW THE TWO LAYERS STACK**01 / THE SIGNAL****Rules-based NLP.**

The same S-Factor sentiment engine, qualified by fifteen-plus factors. Unchanged.

02 / THE SUMMARY**AI, applied after.**

Adds context around the sentiment metrics across a 24 hour period. It never qualifies the signal.

03 / THE RESULT**No model to build.**

Precision that is still algorithmic grade, with no data engineering on their side.

RISK MANAGER · WHY THEY BUY

They can quickly understand why a name is moving or trending without building a model around it, or taking time to conduct research — while still having a precision model that is algorithmic grade.

PORTFOLIO MANAGER · WHY THEY BUY

Fast, reliable context that validates or invalidates a thesis, and real-time visibility on catalysts as they emerge — decision support rather than signal engineering.

SITS ALONGSIDE

S-Factor Feed · the source signal, page 04

Podcast Sentiment · qualitative output, page 07

GMRF / MRF · filings, page 08

Coming soon: AI Summaries extend to filings data, giving risk managers and PMs the same digestible layer they get on social and news sentiment today.

TRACK RECORD & TRIALS

Up to **10+ years of historical data** across all social, news and podcast feeds, backtested against the S&P 500 to demonstrate alpha generation. We provide it during trial periods so investors can run their own backtesting, and any gap or outage is backfilled.

THE THIRTY-SECOND VERSION

"This is the same sentiment signal systematic desks trade on, written in plain English. You get the read on why a name is moving without standing up a model — and the AI only writes the summary, so the number underneath is never generated."

IF THEY PUSH BACK

"We don't trust AI-generated market summaries." Neither do we. The signal is rules-based NLP; AI is added afterward to describe it. Nothing in the score is model-generated.

PRODUCT 03 · NEWS SENTIMENT

Quantitative News Feed

PRIMARY PERSONA · QUANTITATIVE TRADER
COVERAGE · U.S. EQUITIES ONLY**WHAT IT IS**

Very similar in nature to all our social media feeds — it is simply ingesting purely news sources, globally. The same proprietary rules-based NLP Sentiment Engine runs underneath, so the output is structured, model-ready and directly comparable with the S-Factor Feed.

HOW TO POSITION IT

As a **complement, not a substitute**. News and social catalysts are different signals on the same name, and because our feeds are never blended, a desk chooses which sources enter the model.

SCOPE · BE PRECISE

The Quantitative News Feed **only monitors U.S. Equities**. It does not carry the multi-market, futures, forex, commodities, crypto or private company coverage of the S-Factor and Activity Feeds. If a prospect needs non-U.S. names or other asset classes, lead with S-Factor and position this as an add-on.

WHERE IT SITS IN THE STACK**01 / SAME ENGINE****One methodology.**

Rules-based NLP across social, news and filings — so scores reconcile instead of needing two vendors reconciled.

02 / SOURCES**Global news ingest.**

News sources worldwide, scored on U.S. equities.

03 / DELIVERY**Structured output.**

Model-ready, with no cleaning step before research.

WHO IT IS BUILT FOR

The same short-horizon, higher frequency models the social feeds serve. News is a catalyst source, so the signal decays the same way — real-time ingest is the point.

TRACK RECORD & TRIALS

Up to **10+ years of historical data** across all social, news and podcast feeds, backtested against the S&P 500 to demonstrate alpha generation. We provide it during trial periods so investors can run their own backtesting, and any gap or outage is backfilled.

SITS ALONGSIDE

S-Factor Feed · the social signal, page 04

Activity Feed · ingest timestamps, page 04

AI Summary Feed · qualitative layer, page 05

THE THIRTY-SECOND VERSION

"If you are already modelling our social signal, this is the news-side catalyst on the same names, through the same engine — so the two are comparable rather than something you have to reconcile."

IF THEY PUSH BACK

"We already have a news feed." They have headlines. This is a scored, structured signal built for a model, from the same engine as the social signal they are evaluating.

PRODUCT 04 · PODCAST SENTIMENT

Podcast Sentiment Analysis Feed

PERSONAS · QUANT TRADER + PM

HORIZON · LONGER TERM

WHAT IT IS

For a longer term strategy, this feed provides **long-term conviction** by giving insight into what public discourse is saying about companies in podcasts centered around business, technology and finance. It is a quantitative signal into the trending discourse of companies being talked about amongst market moving media, which has been shown to have a growing influence amongst listeners.

TWO OUTPUTS, ONE FEED

The feed generates a **qualitative** and a **quantitative** output. Quant traders take the quantitative output. Portfolio managers can use both — the qualitative output for contextual insight, the quantitative output to plug structured signals into trading workflows.

Quantitative output

QUANT TRADER + PM

Delivers structured signals from transcribed and scored podcast audio, ready to **plug into trading workflows**. For both quant traders and PMs this serves as a signal layer in longer-term strategies.

JSON FIELD GROUPS

Sentiment

Transcript

Plus an AI summary of how each company was mentioned, and a relevance score speaking to how much the discourse pertained to the mentioned company.

TRACK RECORD & TRIALS

Up to **10+ years of historical data** across all social, news and podcast feeds, backtested against the S&P 500 to demonstrate alpha generation. We provide it during trial periods so investors can run their own backtesting, and any gap or outage is backfilled.

HOW IT SELLS

This is the answer when a desk says our feeds are all short-horizon. Pair it with S-Factor for both ends of the curve. On novelty: we are the **only quantitative provider of structured signals for podcasts**, and on the qualitative side our only competitor is RavenPack.

IF THEY PUSH BACK

"Podcasts are too slow to trade." Correct, and that is the point. This is not the sub 1-minute product; it is long-term conviction on discourse and emerging brands, scored through the same engine.

PRODUCT 05 · CORPORATE FILINGS

GMRF / MRF

PERSONAS · RISK MANAGER + PM
HORIZON · LONGER TERM

WHAT IT IS

We process corporate filings documents through our sentiment engine to scan for risk language and disclosures at the company level. This product eliminates the manual labor of reading through filings line by line, surfacing risk-relevant content automatically as companies release new regulatory disclosures.

HOW EACH PERSONA USES IT

Risk managers use it as their longer-term signal: systematic filings monitoring across every holding. **Portfolio managers** use the same output to surface thesis-relevant disclosures and risk flags.

WHAT EACH PRODUCT PARSES

GMRF · Global Machine Readable Filings

AR	ARS	ARS/A	FIN SUPP	Intierra SR	MEG-AR	QR	QR/A	SR	Tanshin
----	-----	-------	----------	-------------	--------	----	------	----	---------

MRF · Machine Readable Filings

In partnership with S&P Global Market Intelligence

10-K	10-Q	8-K	20-F	6-K	40-F	S-1	DEF 14A
------	------	-----	------	-----	------	-----	---------

CUSTOM SENTIMENT ENGINE PROJECTS

We are also able to take a repository of documents from other exchanges, or from firms looking to monetize data sets. For risk teams we can build custom feeds on **pump and dumpers** and **activist short sellers**. **Projects need to be reviewed with a CA analyst to determine feasibility** — scope it, do not promise it.

COMING SOON

AI Summaries extend to filings data, giving risk managers and PMs the same qualitative, easy-to-digest layer they get on social and news sentiment today.

SITS ALONGSIDE

AI Summary Feed · shorter-term signal, page 05	Podcast Sentiment · long-term conviction, page 07
--	---

Risk managers and PMs almost always buy filings alongside one of the sentiment feeds — one covers the disclosure, the other covers the discourse.

THE THIRTY-SECOND VERSION

"Your team reads filings to find the risk. We read every filing through the same sentiment engine our quant clients trade on, and hand you the risk-relevant language as it publishes — so oversight stops depending on who had time to read."

IF THEY PUSH BACK

"We already have a filings vendor." Most vendors deliver documents. We deliver processed, risk-scored content across global disclosures, reconciled with the sentiment signal they may already be evaluating.
