

AI Summary Data Feed

Context Analytics' AI Summary Data Feed provides concise, company-level summaries of social media conversations via a JSON API. Updated every 15 minutes, each summary is generated from a rolling 24-hour window of relevant content from CA's certified account network. The feed enables clients to monitor evolving investor sentiment and market narratives through timely, accurate, and actionable social intelligence.

Universe: U.S. Equities, ETFs, Commodities, Forex, TSX, LSE, Euro exchanges, NSE, ASX, Indices

Social Media Coverage: Twitter, StockTwits, Reddit. Available in separate feeds

Data Delivery: CA's data feeds are available 24*7 in real time through a RESTful JSON API or as FTP files. The data is delivered in JSON format as shown below.

Methodology: For any security with 5 or more Tweet volume, the model dynamically aggregates its social media activity within a rolling 24-hour window, with an emphasis on recency when sufficient new information is available. The system prioritizes shorter, more recent timeframes during periods of elevated activity to reflect emerging discussions in near real time. During quieter periods, it leverages a broader portion of the 24-hour window to maintain a comprehensive summary. This adaptive approach allows high-volume topics to surface timely insights while lower-volume topics retain a holistic view of their recent information.

When no new social activity is available on a security, its latest summary is carried forward. As new content becomes available, an updated summary is generated to reflect the latest developments.

Data Sample:

```
{
  "topic_name": "AAOI",
  "topic_id": 4315,
  "summary": "Applied Optoelectronics Inc. ($AAOI) experienced a significant breakout, with some investors predicting a potential 10x return. The stock's performance was linked to the growing demand for AI optical components, driven by hyperscalers and the increasing need for high-speed data center connectivity. The trend is expected to continue, with China's AI optical supply chain accelerating and potentially becoming a significant player in the global market.",
  "start_date": "2026-04-30 01:50:00",
  "end_date": "2026-05-01 01:50:00",
  "indexed_at": "2026-05-01 01:50:53",
  "project_name": "Stock",
  "project_id": 2,
  "sentiment": "positive",
  "is_carried_forward": true
}
```

- 15 minute updates , 24 hours a day

Field Descriptions

Column Name	Description
topic_id	Context Analytics' security ID
topic_name	Security Symbol
summary	AI Generated Summart for the security at a given time. The summary covers Tweets arriving in a 24-hour interval
project_id	ID for asset class (e.g. project_id: 2 for stock asset class)
project_name	Name of the asset class corresponding to the project_id
sentiment	AI-Generated Sentiment classification of the summary (Positive, Negative, or Neutral)
start_date	Starting timestamp in UTC Time of the 24-hour window where Tweets are taken for the summarization
end_date	Ending timestamp in UTC Time of the 24-hour window where Tweets are taken for the summarization <i>(For historical data before August 2024, use this timestamp for backtesting purpose)</i>
Is_carried_forward	Boolean indicating whether the summary was from a previous time window because of insufficient twitter volume to generate a new summary. TRUE indicating it is an older summary. FALSE indicating new summary.
index_at	Summary creation time. This is the timestamp when data is available in the API.
