Agenda

01

What is SentimentWise?

Platform recap, licensed data, and coverage.

02

Widget 1: Social Sentiment Movers

Real-time discovery — top gainers and losers.

03

Widget 2: Market Sentiment Heatmap

Visual market-level view of sentiment and volume.

04

Widget 3: Social Sentiment Trend

Security-level deep dive with historical context.

05

Widget 4: Sentiment Score & AI Summary

BridgeWise-built current score + live AI summary.

06

Where Widgets Live

Discovery vs. asset pages — the two use-case flows.

07

How to Sell It

Key messaging, objections, and customization angles.

SentimentWise — What Sales Needs to Know

Platform & Data

Licensed Social Data

Licensed access to Twitter/X — not scraped. Most competitors can't confirm licensed access.

Coverage

5,000+ US equities today. Expandable to global equities, ETFs, futures, forex, crypto — per asset class.

Update Frequency

Data refreshes every minute. All four widgets are real-time, not end-of-day.

Social Languages Ingested

Posts ingested in English, Japanese, and Portuguese.

AI Summary Languages

Summaries can be translated into BridgeWise's supported languages.

Delivery & Customization

Available Implementation

Available as embeddable widgets and API

White Label

Fully white-labeled to match the client's branding and design system.

Customizable

Universe (sectors), scoring interpretation, visualization, and internal security ID mapping.

Proven in Production

Live in the Fidelity mobile app — their highest-engagement widget.

Ready to Sell

Available now — this isn't a roadmap item.

SentimentWise — How It Works

Social Sentiment Movers

Real-time discovery — top 10 most positive & negative stocks by social sentiment

Widget Anatomy

Social Sentiment Score

Current score for the stock (raw, numeric, or English label — client's choice).

Relative Tweet Volume

Z-score vs. baseline: how much more/less discussion than normal.
Positive = above average.

Raw Tweet Count

Absolute number of tweets right now.

Tweet Dispersion

% of Tweets from unique accounts. Higher = organic conversation. Low = possible spam.

Social Sentiment Movers

Discover stocks ranked by real-time X social sentiment.

Top Sentiment

Bottom Sentiment

Symbol	Name	Social Sentiment	Rel Tweet Volume	Tweet Volume	Dispersion
KURA	Kura Oncology, Inc.	4.19	3.19	25	0.52

As at May 21, 11:05 CDT

Social Sentiment Descending, Tweet Volume > 12

Social Sentiment Movers

Real-time discovery — top 10 most positive & negative stocks by social sentiment

Enablement Notes

Discovery use case

Fidelity calls this their highest-engagement widget. It surfaces stocks users had never considered — creating new trade ideas.

Updates every minute

True real-time — not a daily or hourly feed.

Any asset class

Equities in the demo, but works for ETFs, crypto, forex, futures — per feed, never mixed.

Fully customizable

Columns, scoring format, and number of rows can all be configured per client.

Filters out noise

Customizable threshold removes very low-volume tickers where one Tweet skews sentiment.

Social Sentiment Movers
Discover stocks ranked by real-time X social sentiment.

Market Social Sentiment Heatmap

Visual market-level view — box size = Tweet volume, box color = sentiment

Widget Anatomy

Box Size

Relative Tweet Volume — bigger box = more discussion than normal for that stock.

Box Color

Sentiment tag (Positive / Neutral / Negative), the shade indicates how strong the sentiment is - the darker the green, the more positive the sentiment etc.

Click-Through

Tapping a box opens the security's asset page — direct handoff to Score & Summary / Trend.

Market Social Sentiment Heatmap

Visual market-level view — box size = tweet volume, box color = sentiment

Enablement Notes

Visual Engagement

Creates easy-to-digest visual engagement for discovery and ideation.

Updates every minute

Real-time. Same refresh cadence as the Movers widget.

Two versions to offer

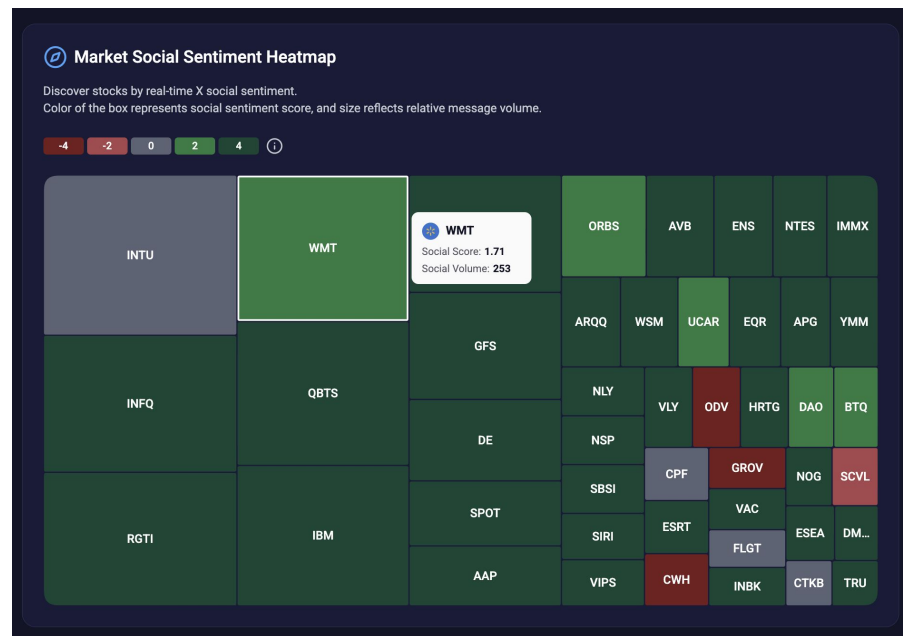

Market-level (full universe) OR portfolio/watchlist-level. Position based on where the client wants to embed it.

Click-through

Tapping a box navigates to the security's asset page — natural handoff to the Trend widget.

Customizable universe

S&P 500, top 100, or a client-defined custom watchlist. Any asset class.

Social Sentiment Trend

Security-level deep dive — sentiment history, volume, and AI summary on one asset page

Widget Anatomy

Top Row (current)

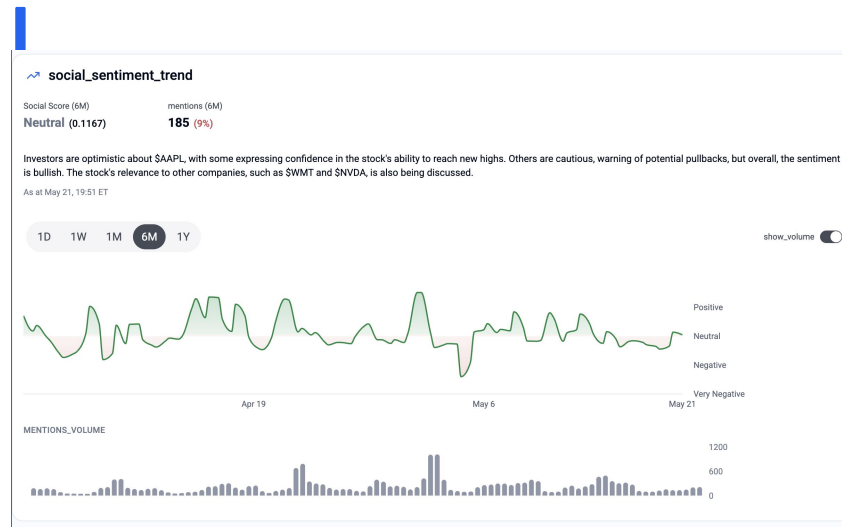

Real-time sentiment score (English or numeric), raw Tweet count, and the current AI-generated summary.

Chart (historical)

Sentiment and volume plotted over multiple look-back periods (30d, 6m, 1y etc.). Shows trend direction, not just current state.

AI Summary

Synthesizes why sentiment is where it is — e.g. 'undervaluation, conference breakthrough, cash reserves.'

Social Sentiment Trend

Security-level deep dive — sentiment history, volume, and AI summary on one asset page

Use Cases

Already hold the asset?

See how sentiment has trended. Use it to decide whether to hold, add, or reduce. Validate what you heard in the news.

Research phase?

Compare historical sentiment to price movements. Spot past events (earnings, layoffs) and look for repeating patterns.

Spotted on Movers or Heatmap?

Click through for the full story — why is it moving, and is the sentiment sustained or a one-off spike?

Sentiment Score & AI Summary

Current numeric sentiment score plus a live AI explanation of what's driving it on a security level

Widget Anatomy

Easy-to-read Score

Current sentiment, normalized to a consistent score range.

Live Refresh

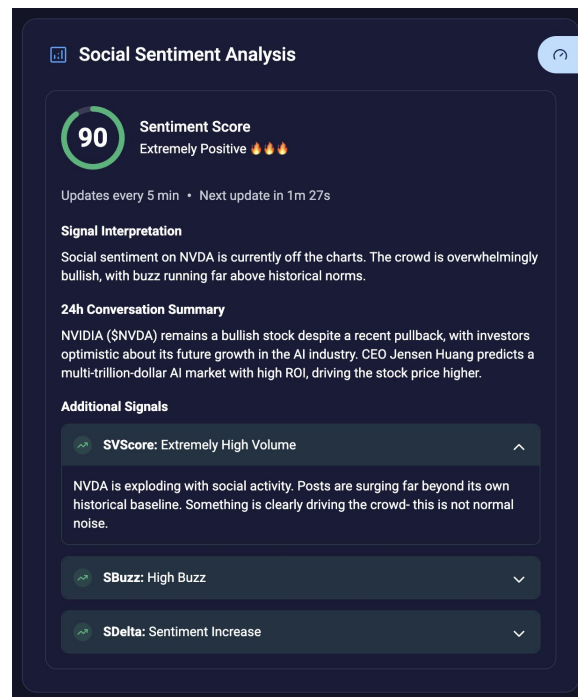

Both score and summary regenerate continuously — not a static, cached description.

AI Summary

Real-time text explaining what's currently driving the score — e.g. earnings, upgrades, product news, volume spikes.

Additional Signals

Additional factors that align with the current sentiment score, to encourage timely user actions and a sense of urgency.

Sentiment Score & AI Summary

Current numeric score plus a live AI explanation of what's driving it

Enablement Notes

Drive Action

Emphasizing time-sensitive opportunities and prompt users to action, directly from the asset page.

Lives on the asset page

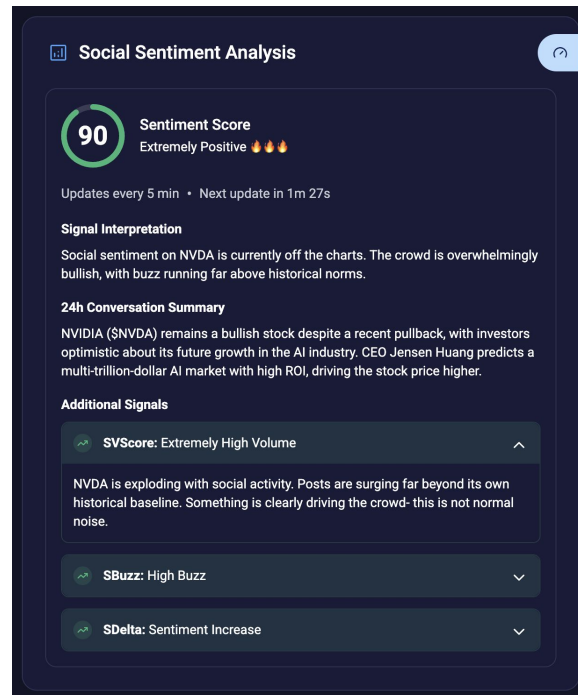

Sits alongside the Sentiment Trend widget. Different purpose — this is a quick-glance, high-engagement surface. The Trend widget is the deep dive.

Fully customizable score ranges

Can be English (positive/negative), numeric (90) or emojis (😊) - fully customizable

AI Summary is real-time

The summary regenerates with fresh data — it tells users what's happening right now, not a canned description.

SentimentWise Delivery Formats

Customizable Sentiment Solutions in the form of:

Widgets

Visualize sentiment momentum trend context at a glance, not just a snapshot.

API

Pull live sentiment scores, volume signals, and AI summaries directly into your models or dashboards via REST API.

Data Feed *powered by Context Analytics*

Direct feed for quantitative trading

Where Each Widget Lives

DISCOVERY / HOME PAGE

Widgets here:

- Social Sentiment Movers
- Market Social Sentiment Heatmap

User goal:

I have no specific stock in mind. Show me what's moving right now so I can find new opportunities.

Sales framing:

These are early trust builders. Showing the user the platform already knows what the crowd is thinking signals you're keeping them genuinely up to date with the market — social proof, before they've even picked a stock.

And of course, it helps surfacing timely opportunities and kickstarts discovery.

ASSET / SECURITY PAGE

Widgets here:

- Sentiment Score & AI Summary
- Social Sentiment Trend

User goal:

I'm already looking at this stock. Give me deeper context to help me decide what to do.

Sales framing:

These are more compounding pieces of confidence in the decision journey — a timely, relevant signal showing what the market is saying about this exact asset, right now, while they're deciding.

These widgets help build conviction, and ultimately, more activity.

Key Messaging & Objection Handling

Lead With

- Licensed X — not scraped, not aggregated, no black box.
- 1-minute refresh. Your users see sentiment shift before it affects price.
- Available across asset classes individually - not mixed feeds
- Live in Fidelity - leading engagement widget

Customization Angles

- Score display: raw numeric, adjustable scales, symbols and emoticons. Match to your UI
- Align data ingestion to be relevant to the individual trader: universe, top moving equities, or personal watchlist and even tweet level ingestion.
- AI summaries in any language

Common Objections

- How do you filter tweets for bots/spam?
- We only need one widget
- What strategy is monitoring sentiment best fit for?
- We build our own
- Is it compliant?
